Social Security Administration

Payroll Tax Contribution Rates for the OASDI Programs

- Employees in *covered employment*, and their employers, each pay 6.2 percent of the employee's *taxable earnings* (12.4 percent is the *combined rate*)
- Self-employed individuals who want to make contributions pay the full 12.4 percent
- The contribution rate for the OASI program is generally 10.6 percent, while it is 1.8 percent for the DI program
 - The Bipartisan Budget Act of 2015 provided a temporary tax rate reallocation from OASI to DI from 2016 through 2018

Contribution and Benefit Base

- This is an annual dollar amount above which earnings in employment covered under the OASDI program are neither taxable nor creditable for benefit computation purposes. Sometimes called “the cap”
- \$128,400 for calendar year 2018. This means:
 - \$7,960.80 is the maximum Social Security tax a person in covered employment will pay in 2018
 - The maximum amount of earnings for 2018 that can be used in the average indexed monthly earnings (AIME) calculation (upon which the primary insurance amount is based) is \$128,400
- This is an *average-wage-indexed* amount

Taxable Ratio

- The 1977 amendments to the Social Security Act raised the contribution and benefit base so that the ratio of *total taxable payroll* to *total covered earnings* was about 90 percent
- Wage indexed thereafter
- This ratio has declined over time, and is now about 82 percent

Proposals Based on Contribution Structure

- Based on the Intermediate Assumptions of the 2018 Trustees Report, the actuarial deficit could be eliminated by increasing the combined payroll tax rate by 2.95 percent, to 15.35 percent
- BUT: the OASDI program has large and increasing annual deficits towards the end of the long-range period
- Proposals to increase tax revenue involve
 - Raising payroll tax rates
 - Raising the contribution and benefit base
 - Other more sophisticated mechanisms (e.g., taxing premiums on employer-sponsored group health insurance)

Contribution and Benefit Base Proposals

- Could eliminate the “cap” completely, and either
 - Count the additional earnings towards benefits ...
 - ... or not!
- Raise the “cap” so that it reaches a certain taxable ratio by a certain year
 - For example, raise the contribution and benefit base until it covers 90% of all taxable earnings in 2024
 - As a reference, a base of \$260,000 covers about 90% of taxable earnings in 2018

Beyond The Cap

- Expand covered earnings to include employer and employee premiums for employer-sponsored group health insurance
- Expand covered earnings to include contributions to voluntary salary reduction plans (like Cafeteria 125 plans and Flexible Spending Accounts)
 - Subject these contributions to the OASDI payroll tax, making the payroll tax treatment like 401(k) contributions
- Apply a 6.2 percent tax on investment income as defined in the Affordable care Act, with unindexed thresholds as in the ACA (\$200,000 for single filer, \$250,000 for married filing jointly)
