REGENERATING
Social Insurance
for MILLENNIALS
& the MILLENNIUM

Introduction

Why do we need to “regenerate” social insurance? What new risks are younger generations facing? How might social insurance adapt to meet these risks?

In this chartbook, we strive to paint a picture of today’s economy, and the various ways in which the socioeconomic climate has shifted since the founding of our core social insurance programs. We begin by painting a demographic picture, followed by a more general look at the economy, and then a dive into new and long-standing, but changing risks. We do not recommend any policy options in the following charts. Instead, we hope to highlight opportunities for social insurance to address new and evolving risks, and thus ensure a more stable economic environment for current and future generations.

This chartbook is a working project that will continue to grow, functioning as a resource for any individuals striving to understand the many new risks faced by today’s workforce. Please submit suggestions and comments to Griffin Murphy at gmurphy1@nasi.org.

Who are Millennials?

As this chartbook draws on various sources with differing definitions of “Millennials,” it is useful to briefly touch on the question of “who are Millennials?”. The most generous definitions place Millennials as being born between 1980 and 2000. More common definitions are 17 year stretches falling somewhere in that 21 year period (typically on the earlier end).

Millennials came of age in an era marked by the terrorist attacks of September 11th, 2001; the acceleration of mobile technology from the cell phone to AI devices and the internet of things; the election of the nation’s first black president and a period of a divided and unproductive Congresses; the financial crisis of 2009 and the Great Recession; the evolution of civil rights from the Defense of Marriage Act to Obergefell v. Hodges; and the Black Lives Matter response to police shootings; among numerous other era-defining events. The extent to which each of these events impacted a given Millennial varies substantially, but these events form the political, social, and economic context for their coming of age.

Table of Contents

Economic Overview: Slides 5-10

Millennial Demographics: Slides 11-16

Emerging and Uninsured Risks: Slides 17-21

The Changing Nature of Work: Slides 22-27

Healthcare: Slides 34-37

Social Security: Slides 38-42

Income Supplements: Slides 43-47

Economic Overview

Productivity growth and hourly compensation growth, 1948-2017

Data are for compensation (wages and benefits) of production/nonsupervisory workers in the private sector and net productivity of the total economy. “Net productivity” is the growth of output of goods and services less depreciation per hour worked.

“The Productivity-Pay Gap”. 2018. Economic Policy Institute. Updated from Figure A in *Raising America’s Pay: Why it’s Our Central Economic Policy Challenge*
<https://www.epi.org/productivity-pay-gap/>

Cumulative percent change in real annual earnings, by earnings group, 1979–2017

Shaded areas denote recessions.

“Top charts of 2018: Twelve charts that show how policy could reduce inequality—but is making it worse instead”. 2018. Economic Policy Institute. Adapted from Figure A in Lawrence Mishel and Julia Wolfe, “Top 1 Percent Reaches Highest Wages Ever—Up 157 Percent Since 1979,” Working Economics (Economic Policy Institute blog), October 18, 2018.
